SUMMARY

Final-year CS undergraduate with hands-on experience building and deploying end-to-end machine learning and full-stack systems, including a churn-prediction platform tuned to 0.821 ROC-AUC and self-hosted on AWS EC2, and Flask REST APIs serving real-time ML predictions. Strong foundation in DSA, OOPs and DBMS, with practical ML/DS skills. AWS Certified Cloud Practitioner and Microsoft Certified: Azure AI Fundamentals, with further cloud/AI exposure via an IBM SkillsBuild.

SKILLS

Programming Languages: Java, C++, Python, SQL

Frameworks & Libraries: Flask, Scikit-learn, LightGBM, NumPy, Pandas, Matplotlib, Seaborn

Cloud Platforms: AWS (EC2, Nginx Reverse Proxy), Microsoft Azure (AI Fundamentals)

Databases & Tools: MySQL, JDBC, Git, GitHub, Power BI, Jupyter Notebook

Core Concepts: Data Structures & Algorithms, OOP, DBMS, Feature Engineering, Model Tuning, SMOTE, Clustering, SHAP Explainability, MLflow Experiment Tracking

EXPERIENCE

Edunet Foundation

09/2025 - 10/2025

AI & Cloud Technology Intern

- Completed an AI & Cloud Technology internship through IBM SkillsBuild, applying machine learning workflows, data processing techniques, and cloud-based platforms to real-world AI use cases
- Built a hybrid movie recommendation system combining TF-IDF content-based filtering and SVD-based collaborative filtering (Python, Scikit-learn, Flask), blending genre similarity and user rating patterns to generate personalized recommendations
- Gained hands-on exposure to cloud infrastructure, deployment models, and scalable AI integration practices

EDUCATION

Vellore Institute of Technology

Sept 2023 - May 2027

- Bachelor of Technology in Computer Science and Engineering (BTech), CGPA: 8.58

PROJECTS

Customer Churn Prediction [GitHub](#) | [Live Demo](#)

- Built an end-to-end ML platform to predict telecom customer churn, segment customers, and generate targeted retention strategies
- Engineered features and applied SMOTE balancing, tuning a LightGBM classifier to 0.821 ROC-AUC and 79% churn recall; tracked experiments with MLflow and applied SHAP explainability alongside K-Means segmentation
- Self-hosted the live demo on AWS EC2 with a Nginx reverse proxy for improved uptime, response latency, and production-grade reliability
- Built a simulated A/B testing framework using chi-square significance testing to validate retention-intervention methodology on high-risk customer segments, integrated as an interactive tab in the live dashboard

Technology: Python, Pandas, Scikit-learn, LightGBM, SHAP, MLflow, Streamlit, Matplotlib, Seaborn, Plotly

Medicine Recommendation System [GitHub](#) | [Live Demo](#)

- Built an SVM classifier to predict across 41 diseases from 132 symptom features, then designed and deployed a Flask REST API serving real-time predictions
- Delivered personalized recommendations alongside each prediction — including precautions, medications, diet, and workout suggestions — to make model output directly actionable for users

Technology: Python, Flask, Scikit-learn, Pandas, NumPy

Smart Inventory Management System [GitHub](#)

- Developed a desktop inventory management system with a real-time dashboard, secure authentication, and a MySQL/JDBC relational data layer for product tracking and stock monitoring
- Built sales management features with automated billing calculations and JFreeChart-based revenue visualizations
- Designed a custom Java Swing UI — including a dark-themed dashboard and custom dialog components in place of default Java dialogs — for a more polished, production-quality user experience

Technology: Java (Swing), MySQL, JDBC, JFreeChart

CERTIFICATIONS

- AWS Certified: AWS Cloud Practitioner
- Microsoft Certified: Azure AI Fundamentals

KEY ACHIEVEMENTS

- Solved 250+ DSA problems on LeetCode and GeeksforGeeks with a contest rating of 1500+, covering arrays, trees, graphs, and dynamic programming
- Scored 100% in the NPTEL Marketing Analytics course (IIT Kharagpur), ranking in the top 1% of ~3,500 certified candidates
